For any Virtuemart shop owner who wants to set up a delivery date (day/month/year) and delivery time/location for your products (food, flowers, bakery, gift...) then this plugin is for you.

Nowadays, shipping is an important issue that most online businesses focus on. For online items, an automatic shipping management is necessary to ensure every order to be delivered on time. Product Advance Delivery date plugin can do you even more than that. It will control delivery time and date automatically instead of manually recording theme.

After installing the plugin like a normal Joomla extension, you will activate the plugin. Thus, shoppers can choose delivery dates, delivery time and delivery locations in a list during their checkout process.
